# AGENDA

- Introduction to the Bots
- Life cycle of the Bot Development
  - Plan & Design
  - Develop & Test (SDK 4.6)
    - Demos (so many demos)
  - Publish / Connect (Azure)
  - Evaluate
- Power Virtual Agents & Bot Framework Composer
  - Demos again
- Bot Builder Community Project
  - No demos, just sample videos 😊

# WHAT ARE BOTS?

Bots are services (powered by rules) that people interact with through conversation and messaging

Conversational AI - Set of technologies that enable computers to simulate real conversations

- Can be used in apps, browser or on IoT devices
- New user interface paradigm

# WHY AND WHY NOW!

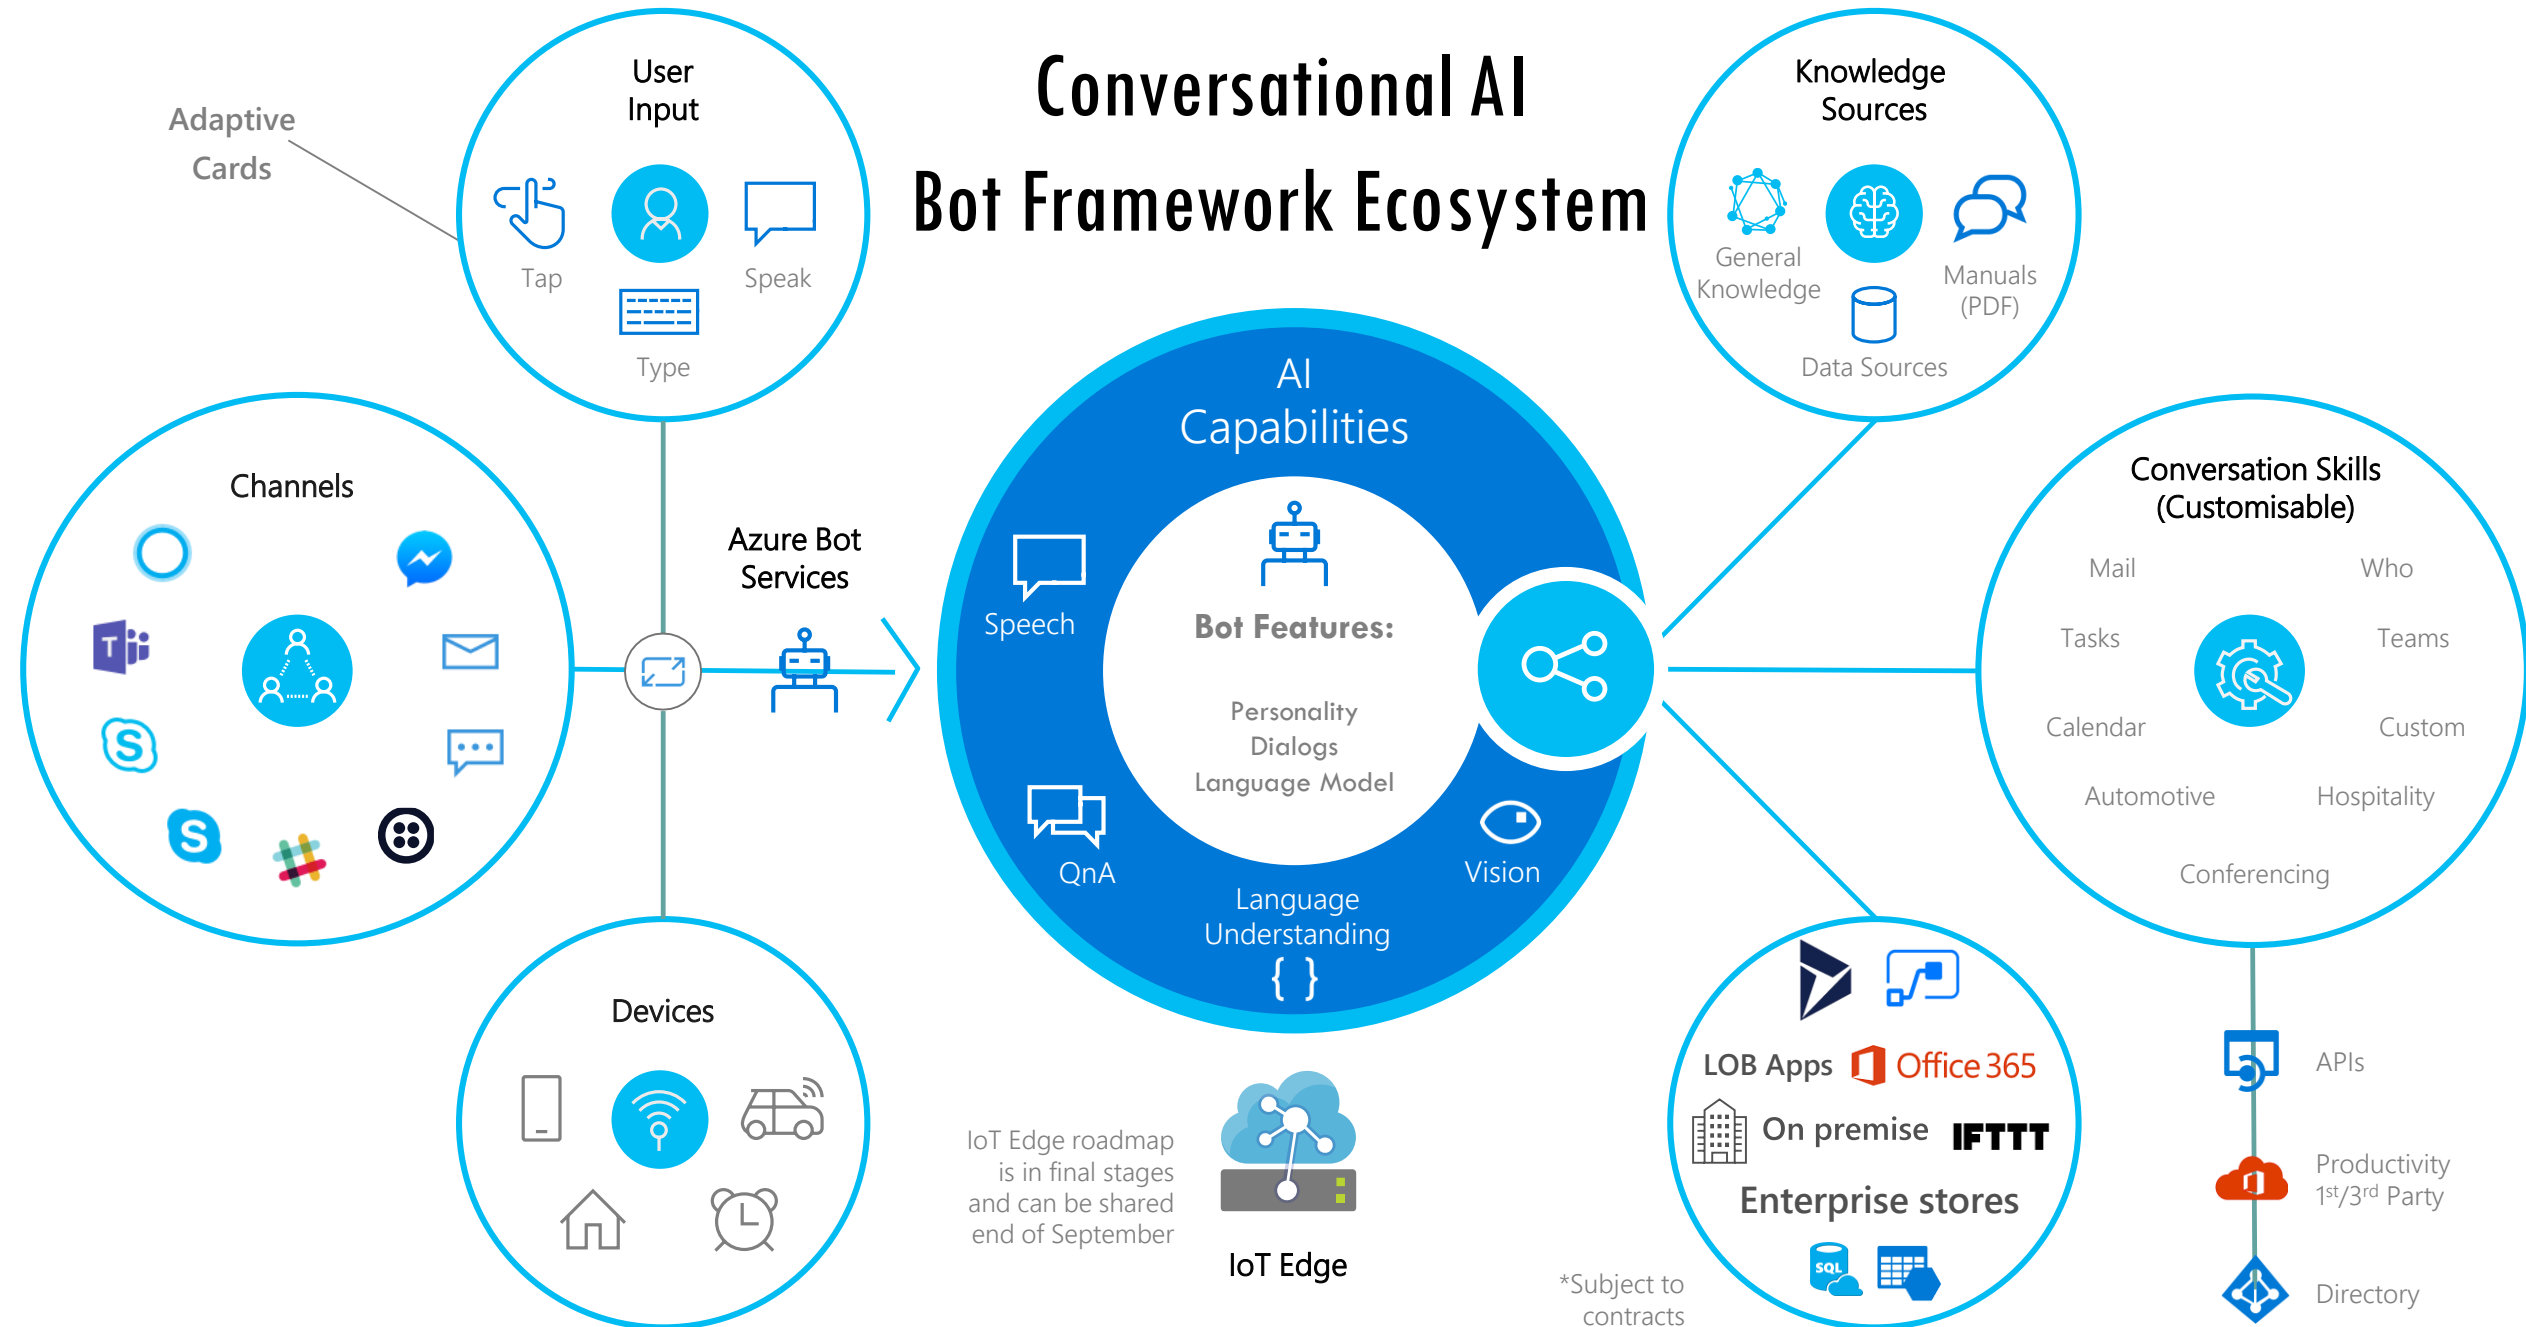

“25 Percent of Customer Service Operations Will Use Virtual Customer Assistants by 2020<sup>[1]</sup>” – Gartner

Google Trends, Australia

[1] - <https://www.gartner.com/en/newsroom/press-releases/2018-02-19-gartner-says-25-percent-of-customer-service-operations-will-use-virtual-customer-assistants-by-2020>

# Conversational AI Bot Framework Ecosystem

# LIFE CYCLE OF YOUR NEXT BOT

***A fool with a plan can  
outsmart a genius  
without a plan!***

***T. Boone Pickens***

# PLAN

- Must be used by people
- Ability to choose over existing experiences (mobile apps, websites etc.)
- Prioritize the right factors

Influencing Factors	!(Influencing Factors)
Does your bot solve the user's problem in an efficient (read: faster) way?	How AI driven your bot is.
Does it run on multiple platforms and devices?	Does it support NLP?
Is it discoverable enough?	Does it support voice or answers queries on your behalf?

# UX — THE WELCOME MESSAGE

- First impression is the key for retaining customers
- Be descriptive and tell user/customer about bot's capabilities
- Menus are valuable than a simple text and they don't affect the smartness of your bot either

***Whether you're designing an app, website or a bot; UX should be your top most priority!***

Hi! How may i help you?

Hello! This is AMA Airlines Bot. How may I help you today?

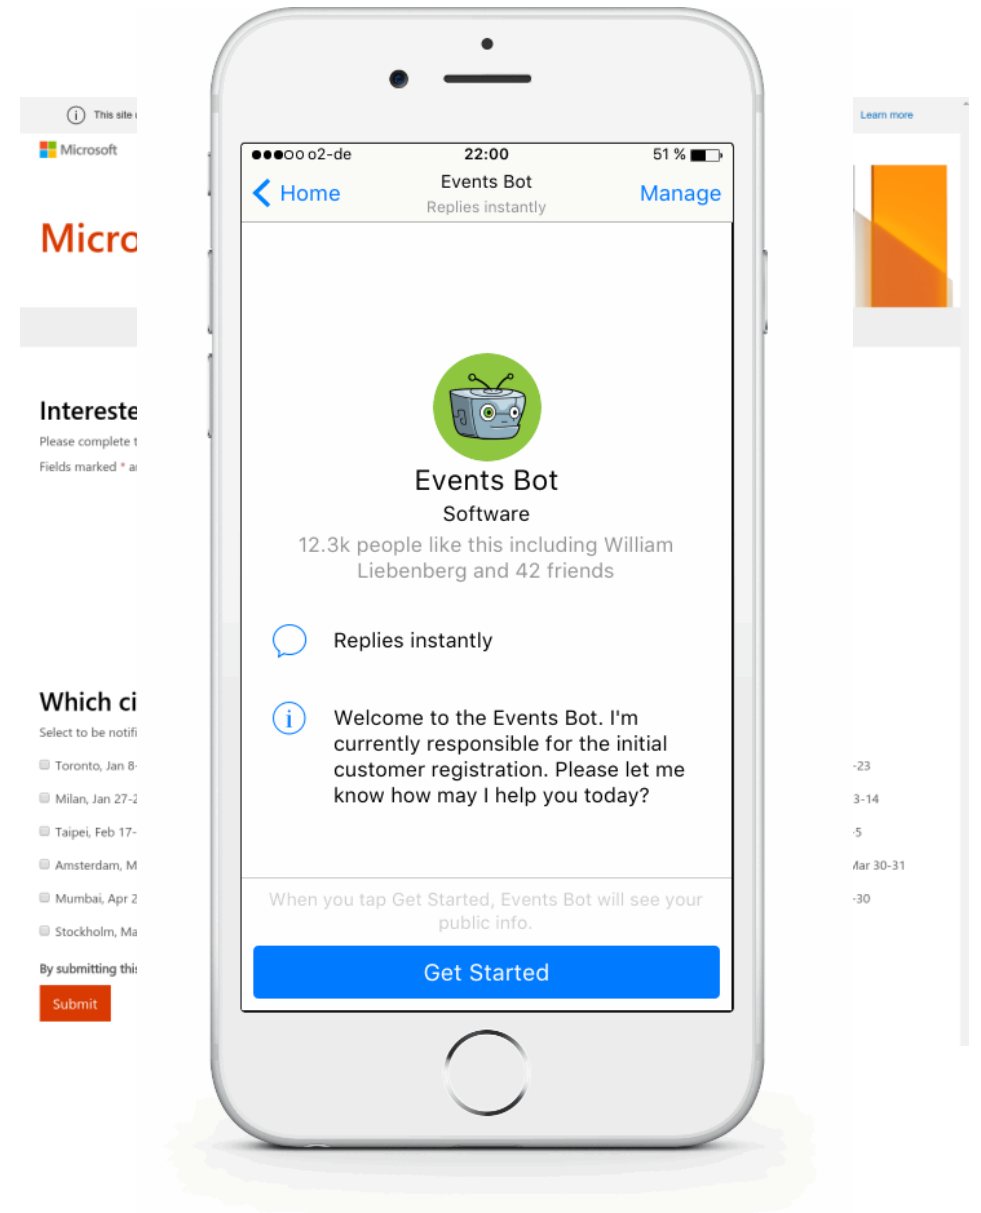

I want know fligh status

I want to book a flight

I want to modify my existing booking

# UX — TRADITIONAL VS. BOT

- Forms — Input Tools
- Messages (with rich controls) are the new UI
- Information gathering = Active Experience

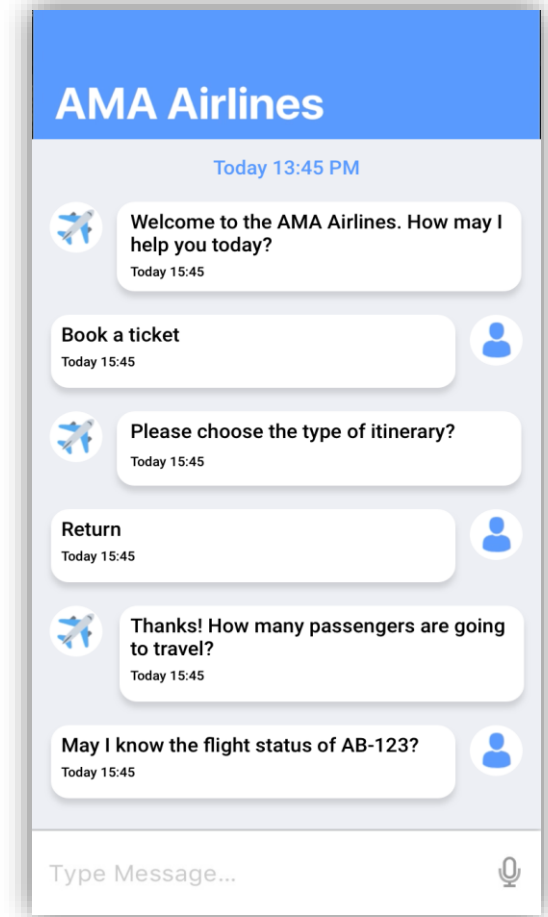

# UX — NAVIGATION PATTERNS

- Non-linear / free form
- Sequential / Guided

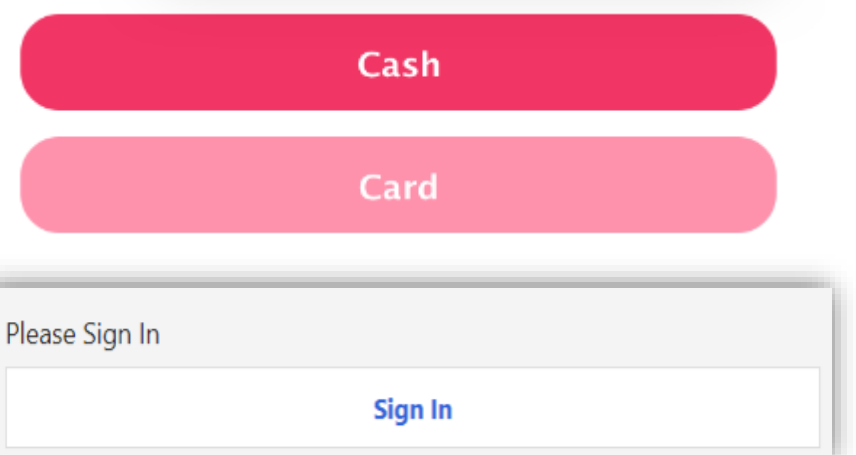

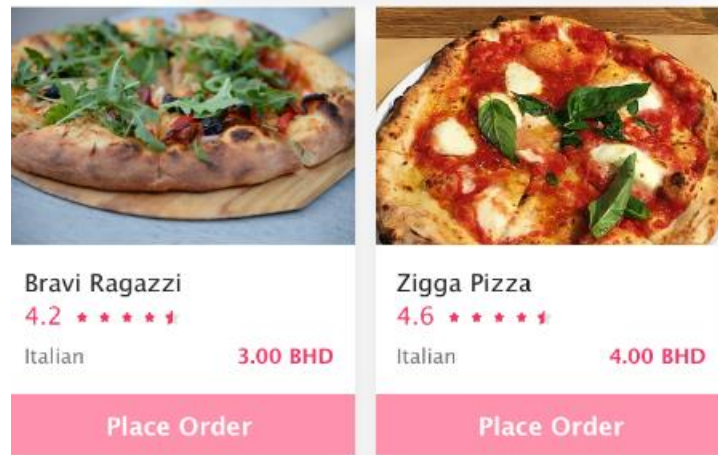

## Handle Interruptions

- Do you want to answer the user first?
- Discard your previous context and start from the new one?
- Resume from the previous discussion after answering this?

# UX — DESIGN ELEMENTS - 1

- Rich Controls
  - Buttons, Images, Carousels
  - Cards (Adaptive, Audio, Video, Sign-In, Hero, Thumbnail etc.)

# UX — DESIGN ELEMENTS - 2

- Text and NLU (Natural Language Understanding)
  - Microsoft LUIS
  - IBM Watson API\*
  - Amazon Alexa\*
  - Google DialogFlow

For e.g. /start vm “startrek 1”

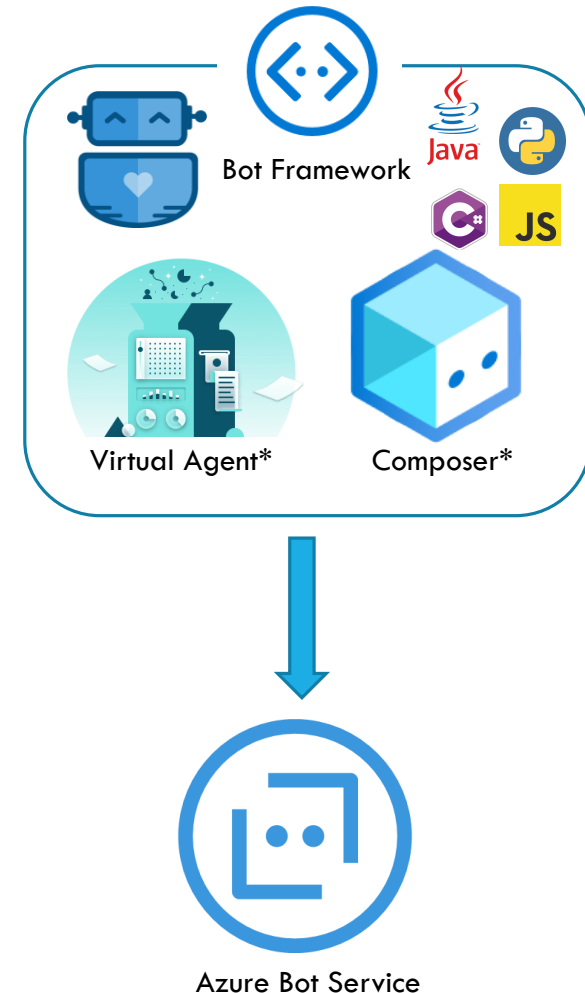

- Speech
  - Cognitive Speech APIs

# LIFE CYCLE OF YOUR NEXT BOT

# CHOOSE THE RIGHT OPTION!

- Business objective is the key
- Code vs No-Code
- Bot Framework (or Composer\*) Bot, Virtual Assistant (Enterprise) or Power Virtual Agent\*?

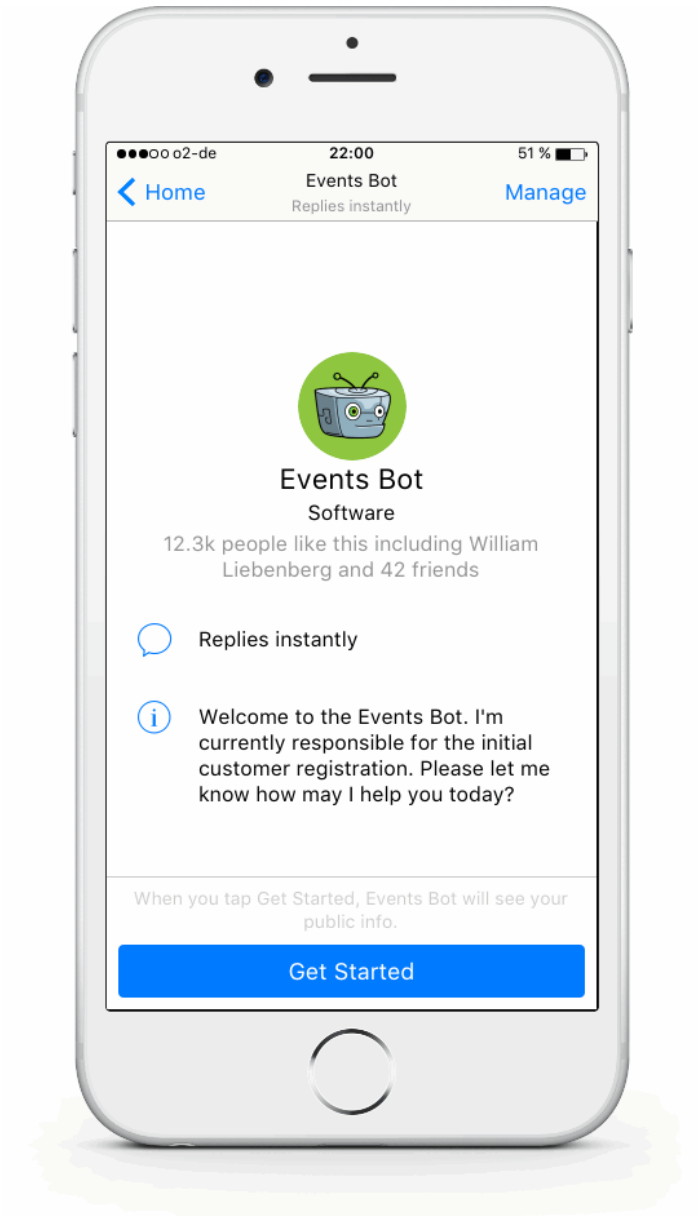

\* Preview

# DEMO

~~HELLO WORLD~~

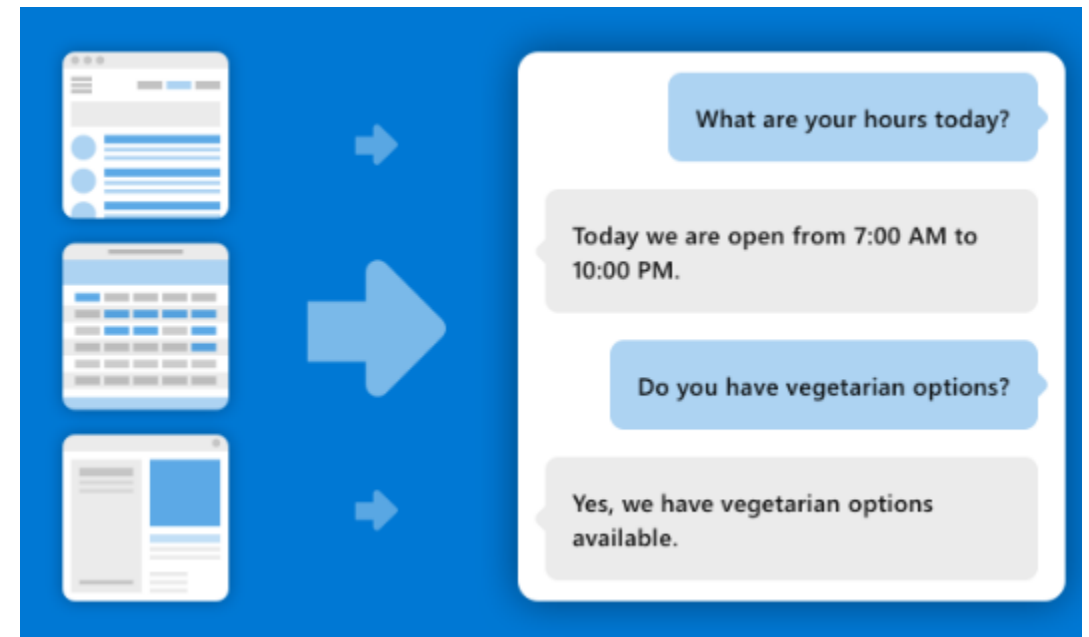

## EVENTS BOT

# QNA MAKER

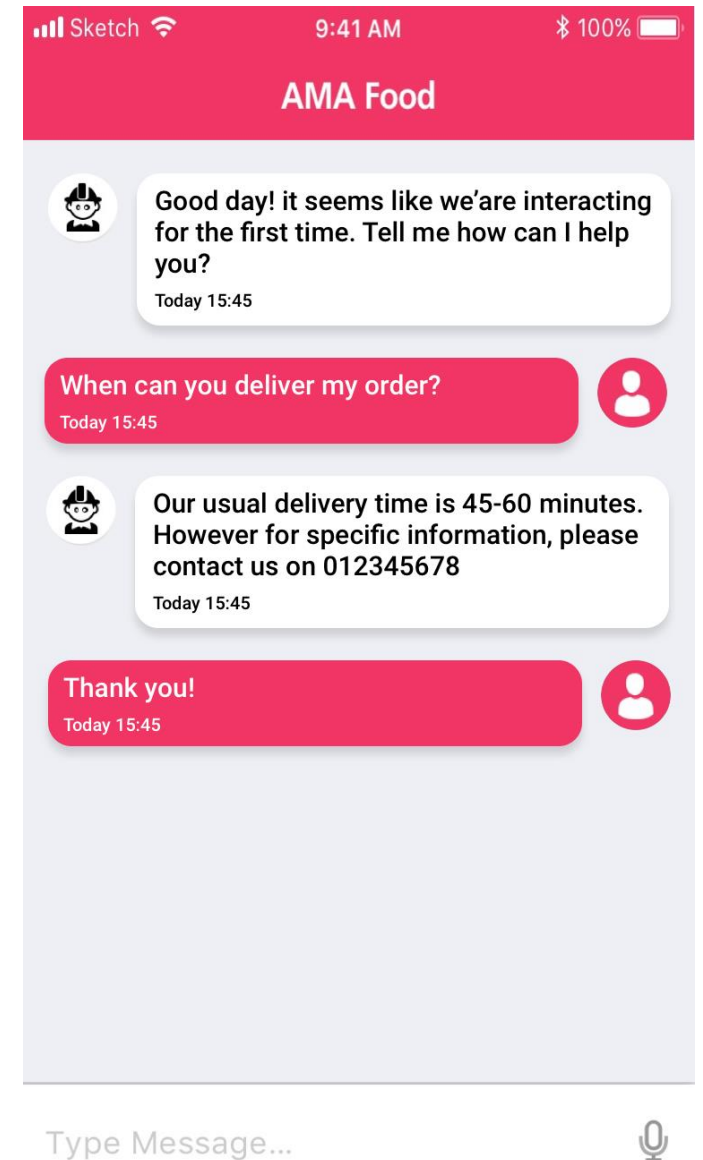

- Create conversational layer over your existing data (FAQs, product materials, manuals or support documents)
- Choose a persona for your brand that's professional, friendly, witty, caring or enthusiastic.
- Markdown support by default
- Support for more than 50 languages

# DEMO

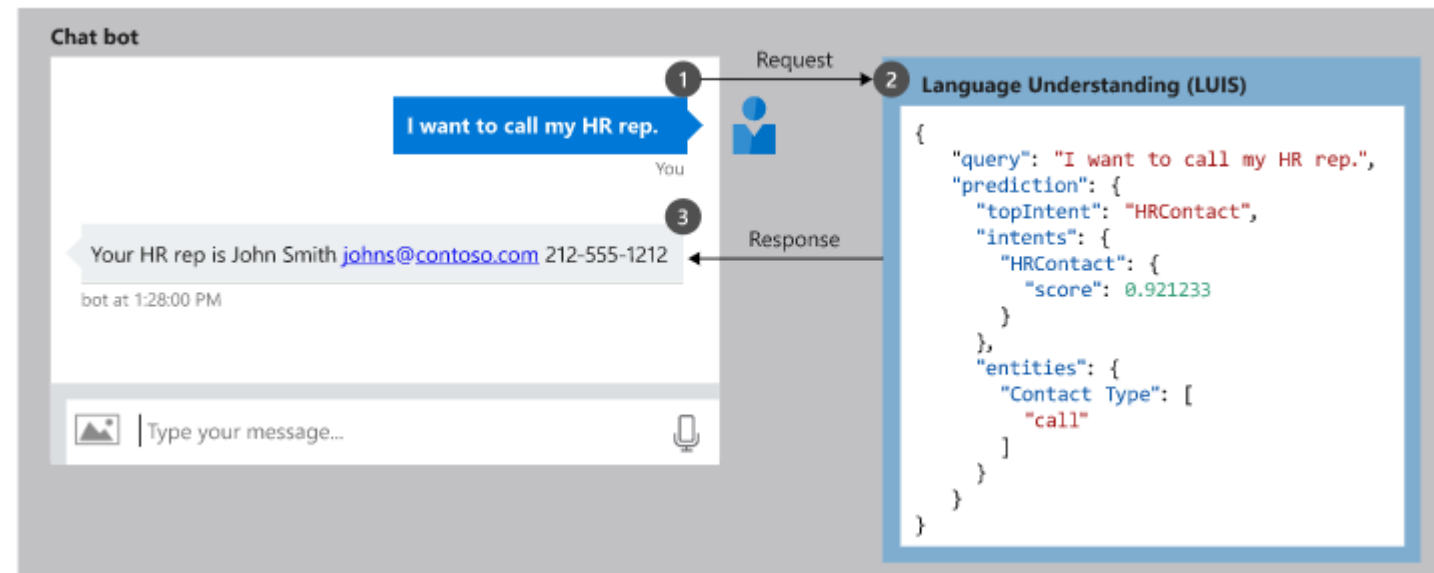

## FOOD BOT

### QNA MAKER

# LUIS

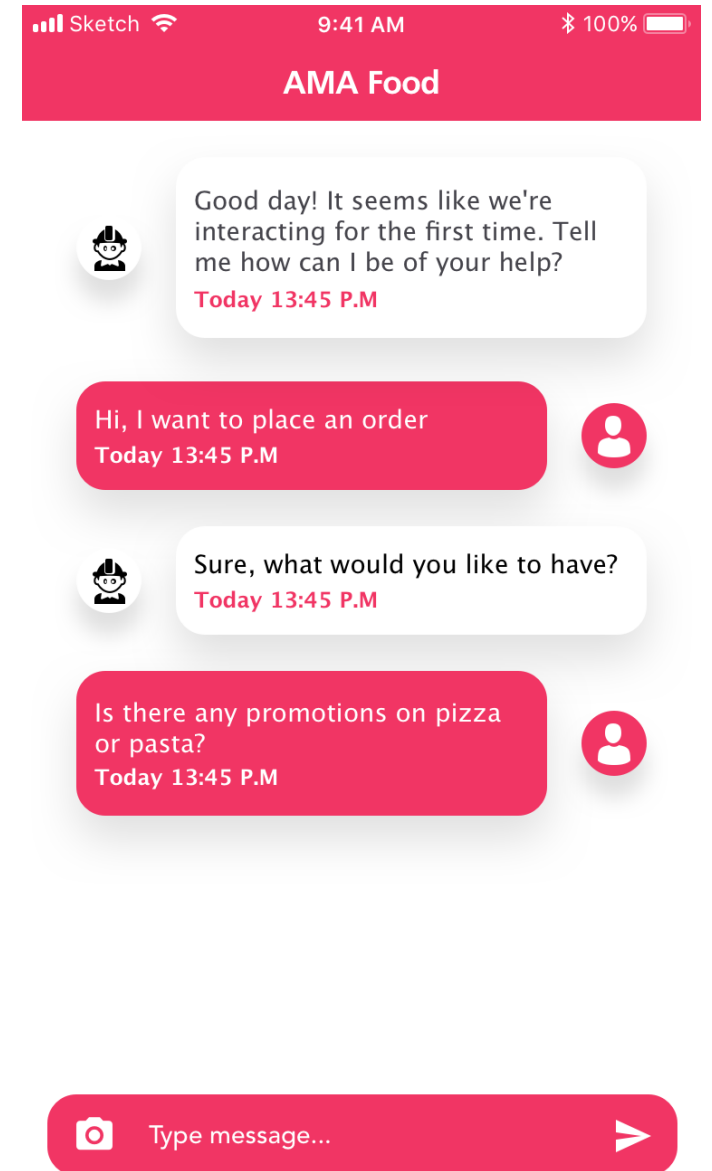

- Add natural language capabilities to your bots (or in any kind of apps)
- Pre-built entities let you build custom language solution
- Big set of tools available to accelerate your dev cycle
- More than 20 languages are supported
- Text Analytics out of the box

# DEMO

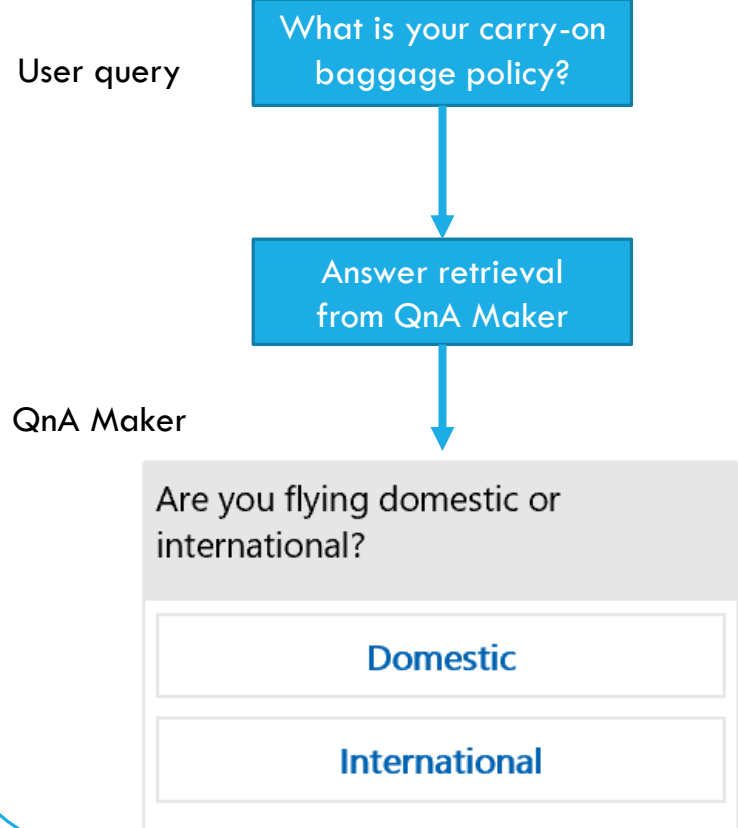

## FOOD BOT

LANGUAGE UNDERSTANDING INTELLIGENT SERVICE (LUIS)

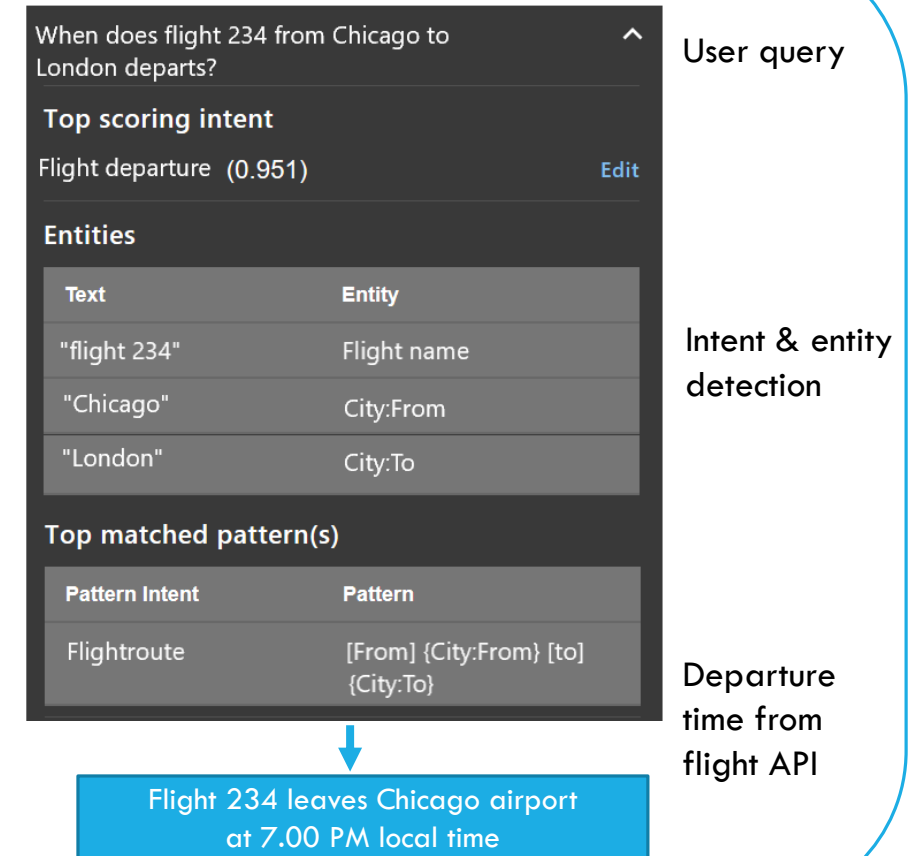

# QNA MAKER VS. LUIS

## Information Based Scenario

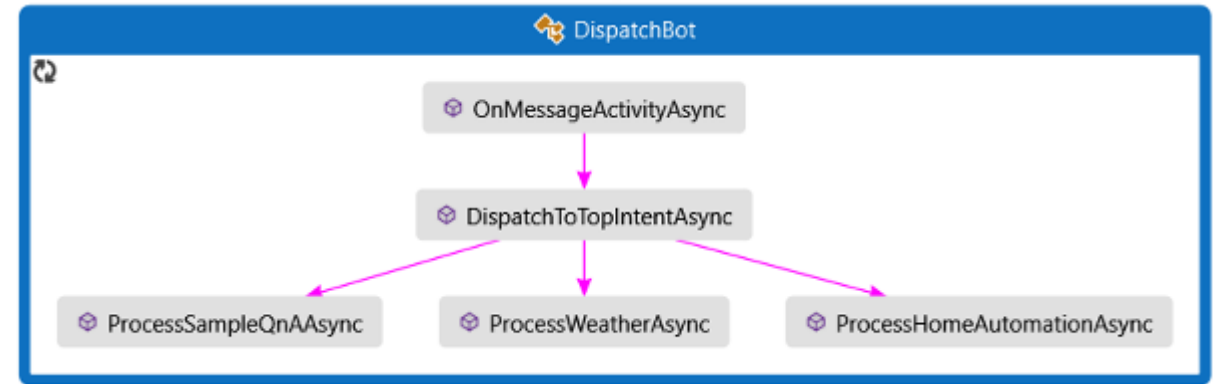

## Task based Scenario

# DISPATCH TOOL

- Effective bot builder tool
- Dispatch intent across multiple components (dialogs) of the bot
- Combines LUIS, QnA Maker and other knowledge bases for the bot into unified language model

# DISPATCH TOOL

```
dispatch init -n FoodDispatch --luisAuthoringKey "<LUISkey>" --luisAuthoringRegion westus
```

```
dispatch add -t luis -i "<appId>" -n "FoodApp" -v 0.1 -k "<LUISKey>" --intentName  
l_foodLUIS
```

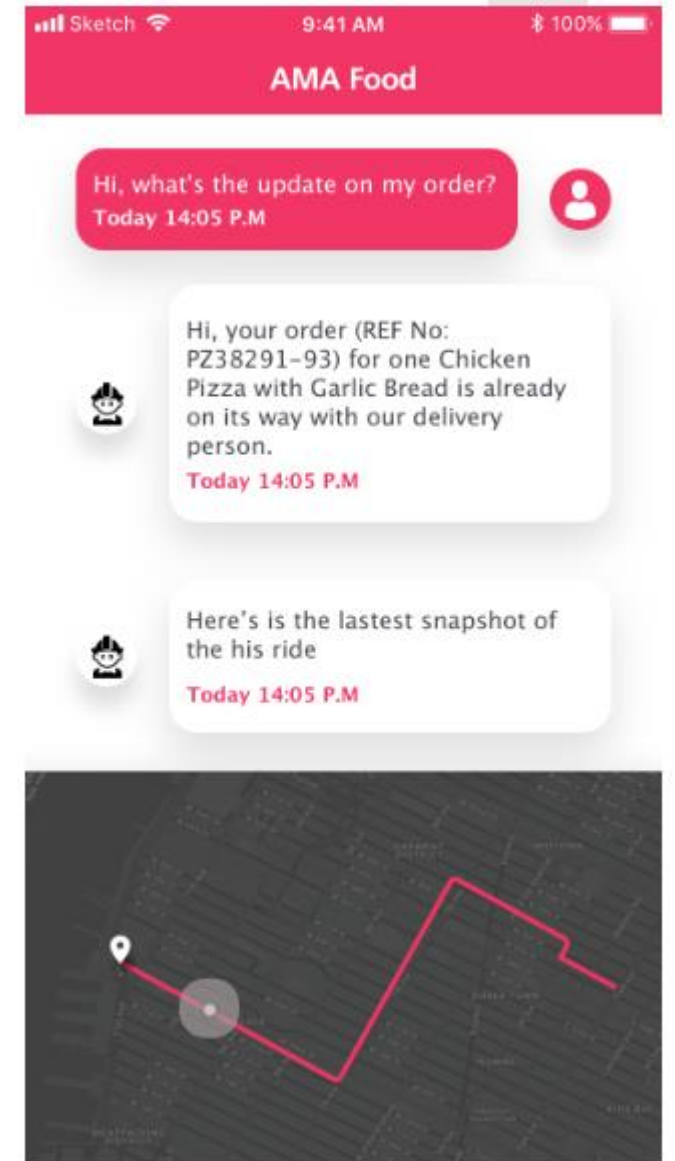

```
dispatch add -t qna -i "<kbId>" -n "qandademoservice" -k "<QnAKey>" --intentName q_FoodQnA
```

```
dispatch create
```

```
PS C:\Users\Arafat\source\repos\CognitiveRocket\Community\2019\Azure AI Meetup\Demos\AzureAIMeetup\FoodDispatchBot\CognitiveModels> dispatch init -n  
FoodDispatch --luisAuthoringKey "dd0e9b8d4973410f902f435f05a82028" --luisAuthoringRegion westus  
>>  
FoodDispatch.dispatch created  
PS C:\Users\Arafat\source\repos\CognitiveRocket\Community\2019\Azure AI Meetup\Demos\AzureAIMeetup\FoodDispatchBot\CognitiveModels> dispatch add -t  
luis -i "22b54256-2d94-4b24-9fa4-f6709bddc421" -n "FoodApp" -v 0.1 -k "dd0e9b8d4973410f902f435f05a82028" --intentName l_FoodLUIS  
LUIS app id:22b54256-2d94-4b24-9fa4-f6709bddc421, name:FoodApp, authoring key:dd0e9b8d4973410f902f435f05a82028, version:0.1 added to FoodDispatch.di

# DEMO

## FOOD BOT DISPATCH

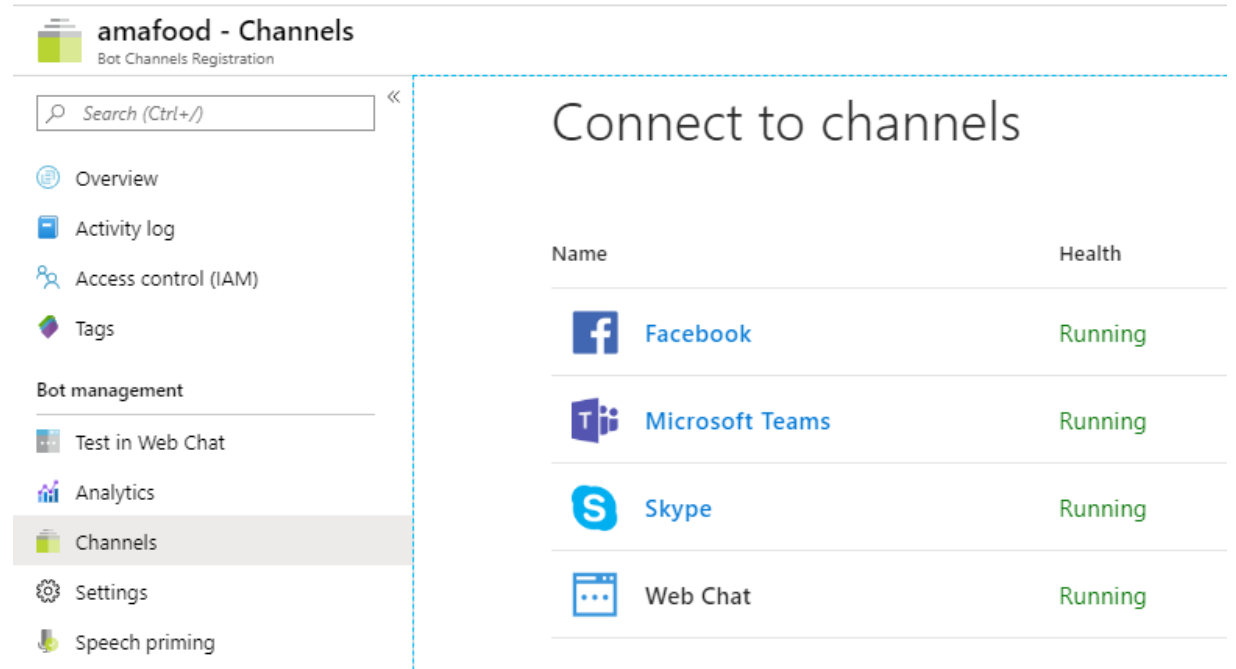

# LIFE CYCLE OF YOUR NEXT BOT

# AZURE BOT SERVICE

- Create Channel Registration in Bot Services
  - Note Application ID and Password (PLEASE! 🙏) and add it to your bot's appsettings.json
  - Configure the channels (they won't work right now, don't get excited)
- Publish your bot as App Service
  - CLI / VS 2019 – all your choice!
- Try out in Web Chat and then the rest..

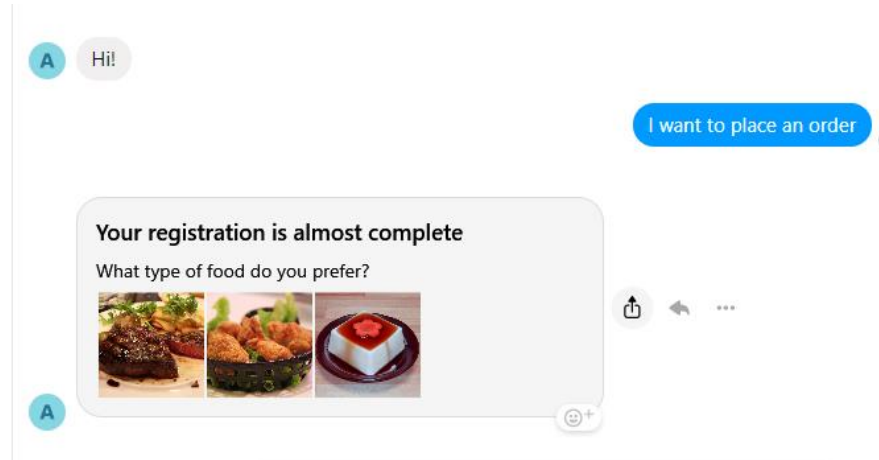

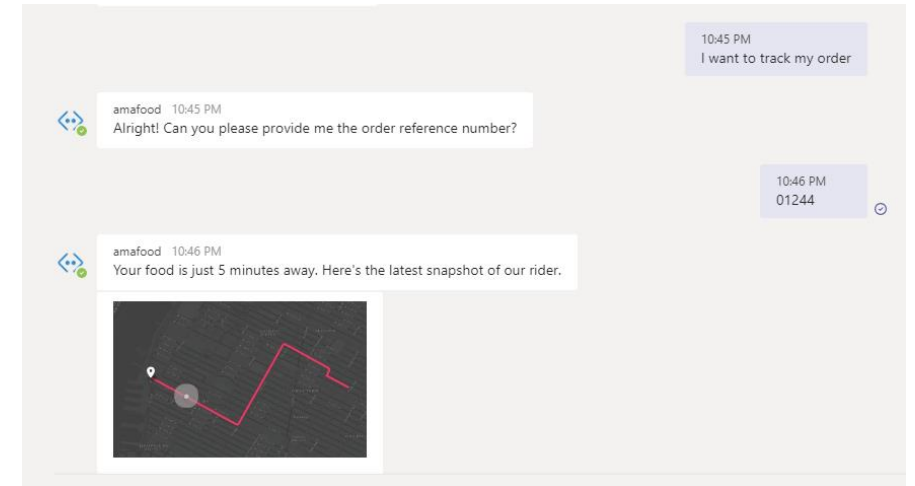

The screenshot shows the 'amafood - Channels' page in the Azure Bot Service portal. The left sidebar contains a navigation menu with options: Overview, Activity log, Access control (IAM), Tags, Bot management (expanded), Test in Web Chat, Analytics, Channels (selected), Settings, and Speech priming. The main content area is titled 'Connect to channels' and displays a table of connected channels.

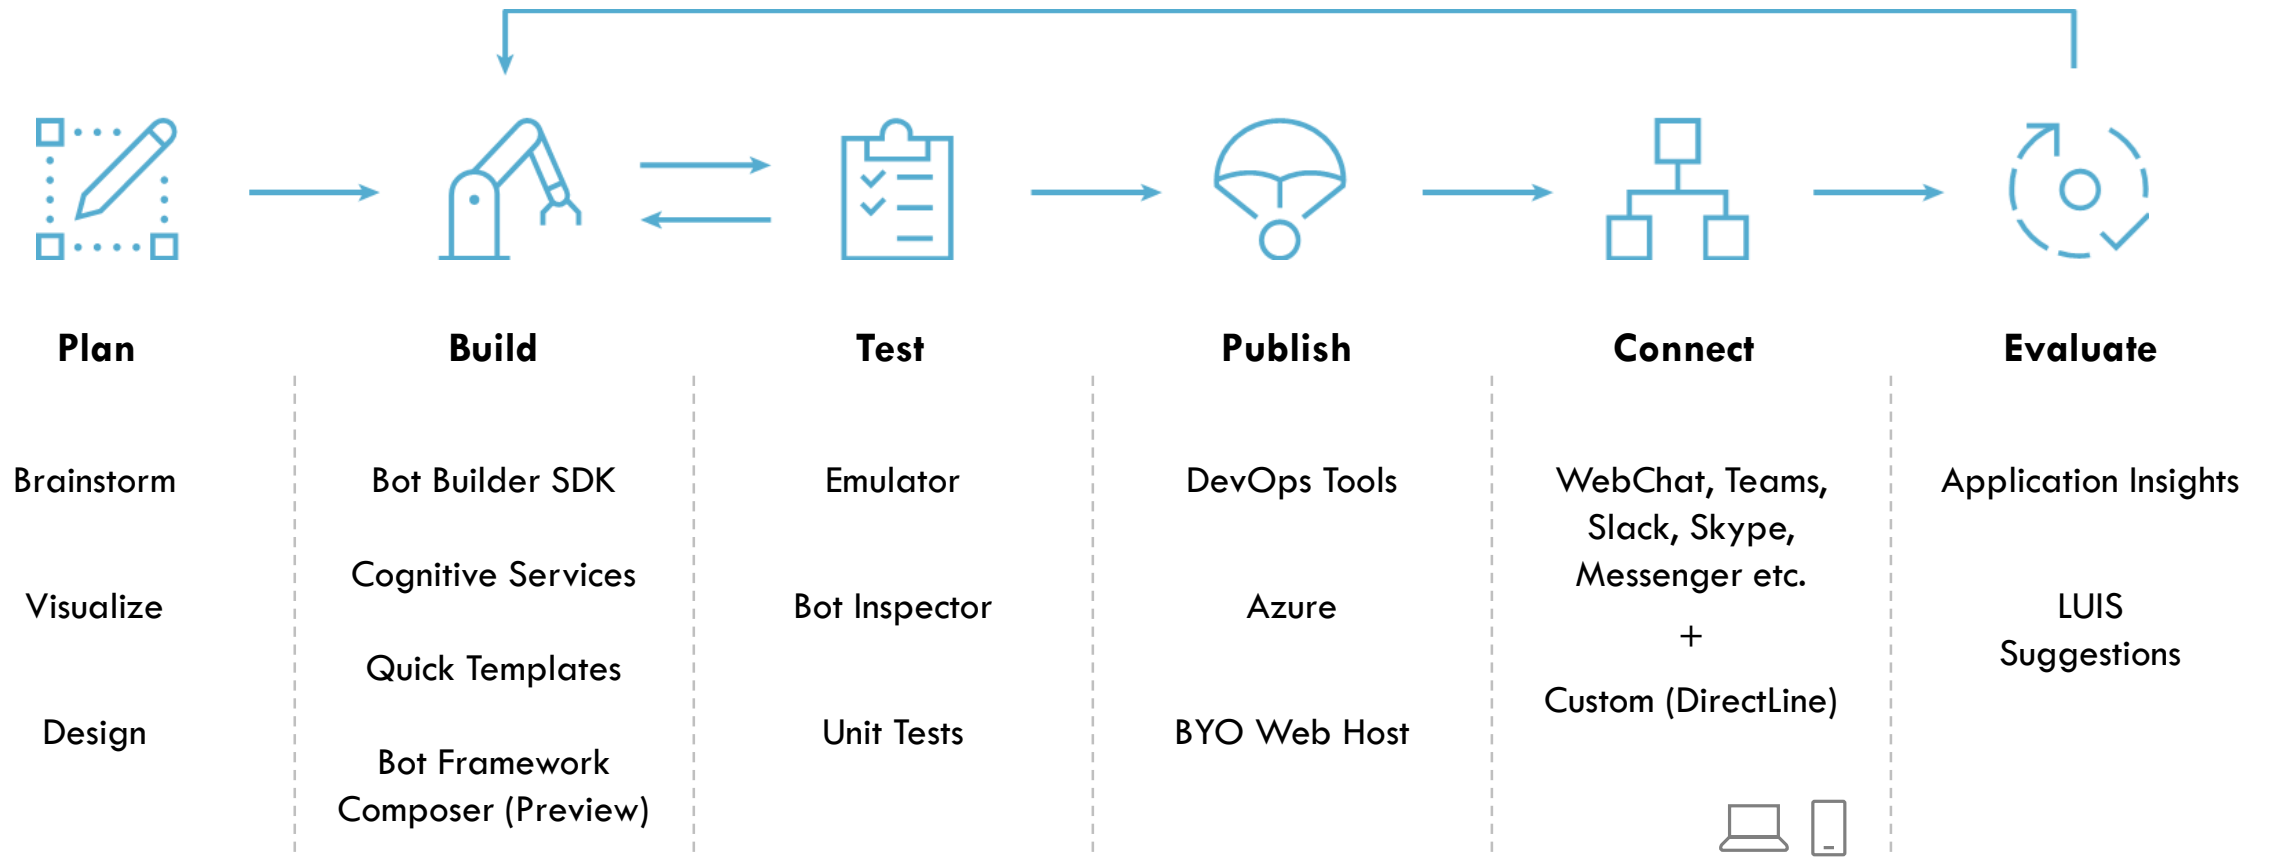

Name	Health
 Facebook	Running
 Microsoft Teams	Running
 Skype	Running
 Web Chat	Running

# ONE CODE: ALL CHANNELS!

- Just follow the integration guide on Azure
- Facebook Messenger, Teams, Slack and much more!
- Community Extensions (Opensource) such as WeChat, Twilio, WhatsApp etc.

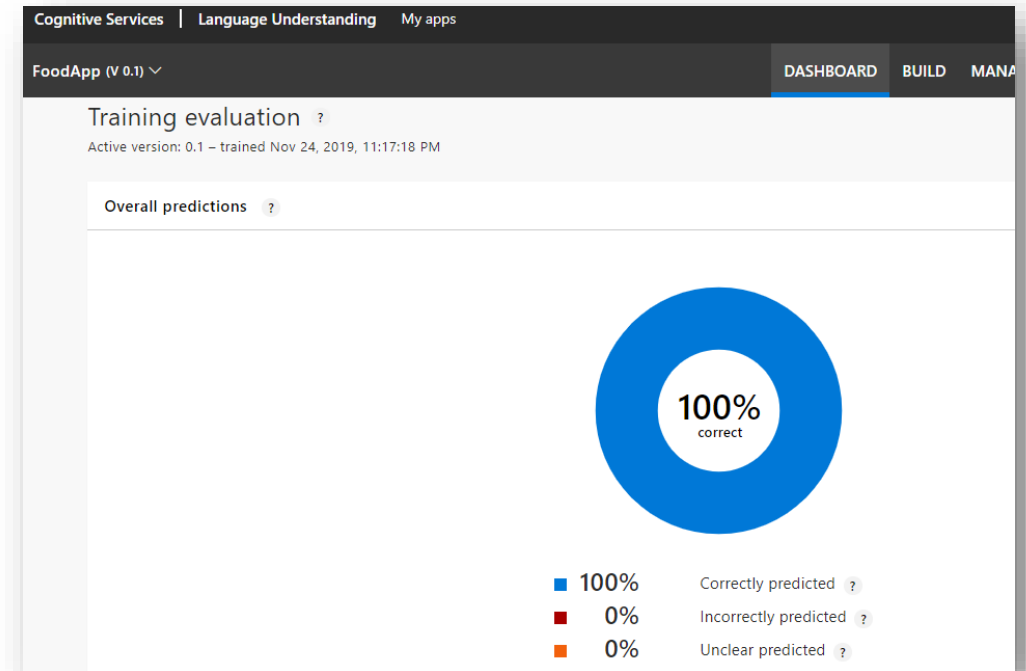

# LIFE CYCLE OF YOUR NEXT BOT

# EVALUATE

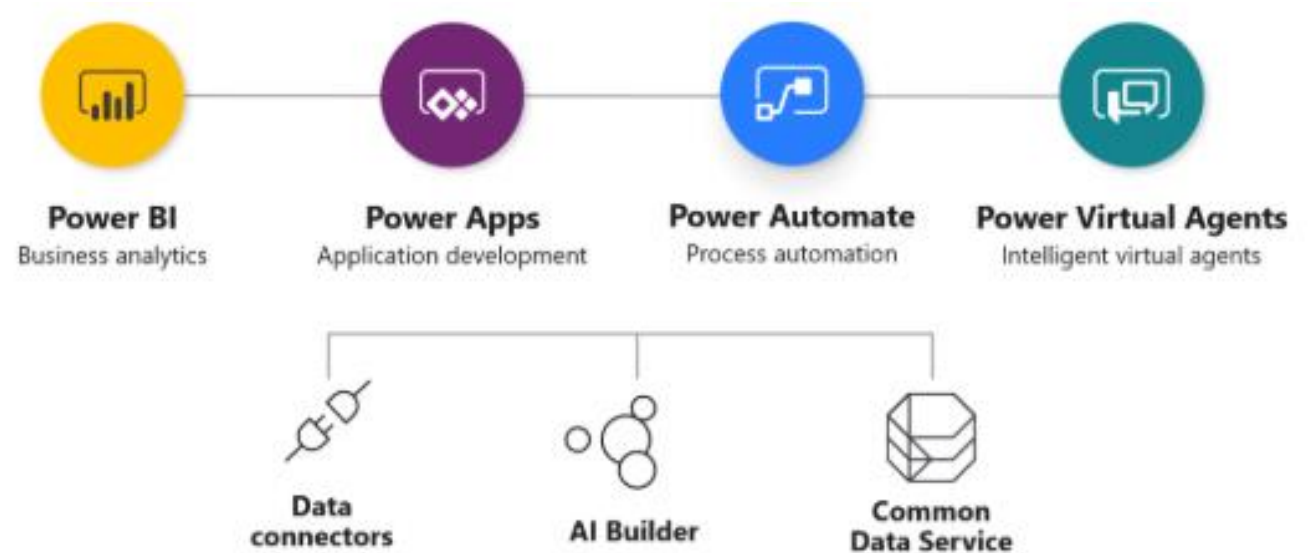

- Keep evaluating your dispatch
- Monitor performance for LUIS & QnA Maker from the portal dashboard

***Latest Conversational  
AI announcements  
from the Microsoft  
Ignite, 2019***

# POWER VIRTUAL AGENTS

- Latest to the Power Platform Family
- Total No-code approach
- Create powerful bots using a guided GUI
- Empower customer support specialists / people closest to customer
- No prior knowledge of data science / developers is required

# DEMO

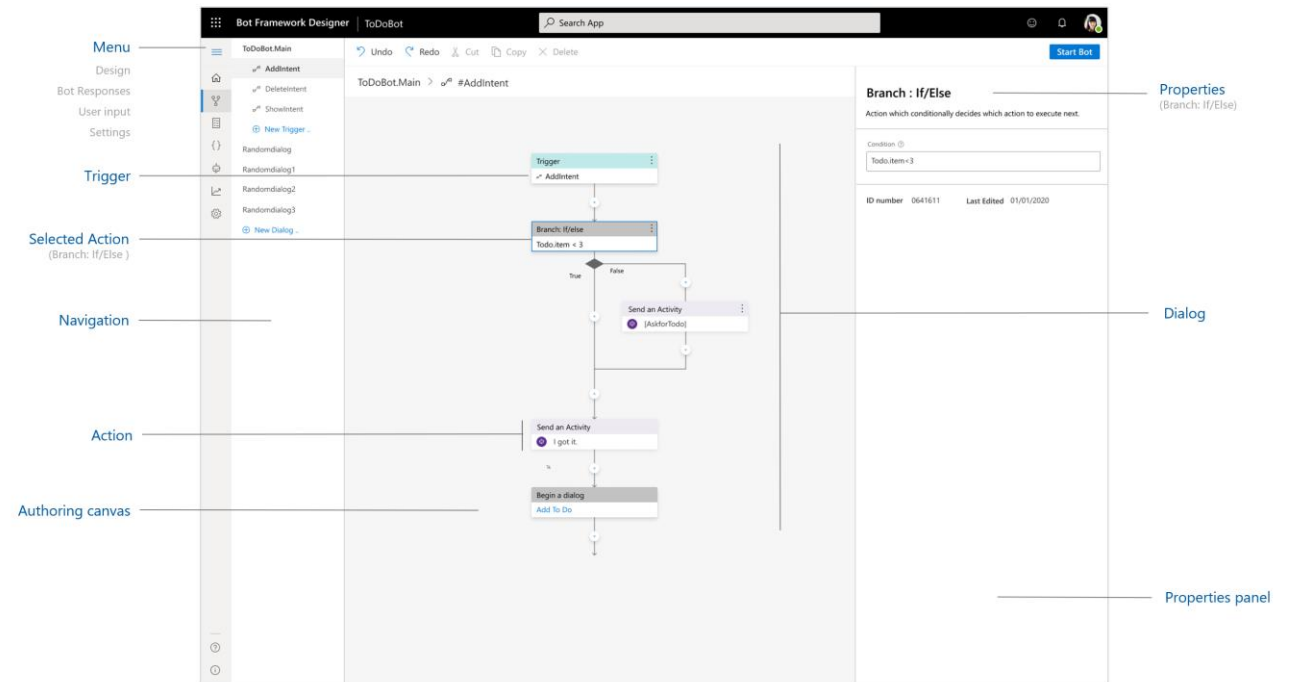

## POWER VIRTUAL AGENTS

# BOT FRAMEWORK COMPOSER

- Open source development tool
- A visual editing canvas for authoring and visualizing the conversation flow
- Language understanding (NLU) in-context of conversation authoring.
- Tools to train and manage dialog components (including NLU and QnA)
- Author Bot responses (powered by Language generation and templating system)
- A ready-to-use bot runtime

# DEMO

## BOT FRAMEWORK COMPOSER

# BOT BUILDER COMMUNITY

- Open source, combined power
- Extensions around Middleware, Dialogs & Recognizers
- Several famous channels adapters
- Recognized by Microsoft Bot Framework product team

<https://github.com/microsoft/botbuilder>

# QUESTIONS?

- **WHAT WE HAVE LEARNT!**

- Planning is essential from Welcome Message to Navigation Patterns
- Use QnA Maker if you've got a simple task to do
- Use LUIS & QnA if you've got a complex task to achieve
- Power Virtual Agent is best if you want to empower your team for authoring the conversations
- Bot Framework Composer is the NEXT BIG THING!
- Opensource contributions matter – be a part of it!
